

Installation Instructions

To set up this project locally, follow these steps:

Prerequisites

- Node.js installed on your system
- npm (Node Package Manager), which comes with Node.js
- MongoDB set up for the database

Setup

1. Clone the repository to your local machine:
git clone <https://github.com/Ambrose821/SOEN341>
2. Navigate to the repository folder:
cd [repository name]
3. To set up the backend API, run the following commands:
cd api
npm install
4. To set up the React front-end, open a new terminal and run:
cd react-client
npm install
npm start

This will start both the API server and the React development server. By default, the API will be available at <http://localhost:9000> and the React application will be available at <http://localhost:3000>.
